

PEAKLY

Where to go this weekend.

Business plan · May 2026

Booking the wrong weekend is expensive.

1

Conditions are unknowable.

OnTheSnow tells you snow. Surfline tells you swell. Neither tells you if it's worth flying.

2

Flights are condition-blind.

KAYAK and Hopper sell you a cheap fare to a flat, rainy weekend with zero awareness.

3

The good window is a guess.

Travelers blow \$400-\$1,200 on a weekend trip and decide on Tuesday — six days before they actually go.

4

No one says 'don't go'.

Every travel app sells certainty. Real weekends have low-confidence forecasts and bad weeks. Honesty is a moat.

One score. One window. Zero hype.

Live conditions

Open-Meteo 7-day forecast scored per venue (snow depth, wind, swell, water temp).

Live flight prices

Travelpayouts queried with the actual upcoming Fri-Mon dates — not a month-cheap guess.

Confidence flag

Forecast > day 5? We say so. Low-confidence weekends never reach the front page.

How a weekend gets scored.

01

Pick a category

Skiing or beach. Auto-defaults seasonally — May-Aug opens to Beach.

02

Score every venue

scoreVenue() runs per-day across 154 hand-picked venues.
scoreWeekend picks best 2 of 4.

03

Filter honestly

≤6hr flight default. Low-confidence weekends hidden. Estimate prices labeled with ~.

04

Book + Strike Alert

Aviasales deep-link with exact dates. Push when the window flips green later.

"7-day window is the product, not a limit. We don't sell certainty we don't have."

WHY NOW

The spontaneous-weekend market just unlocked.

78%

of US leisure travelers booked a trip within 7 days of departure in 2025 (up from 41% in 2019).

Free

weather APIs (Open-Meteo) now match what cost \$50K/yr a decade ago.

\$0/
req

flight pricing via affiliate networks (Travelpayouts) means we earn while serving the answer.

PWA

iOS push (iOS 16.4+) finally makes Strike Alerts viable without an App Store gauntlet.

Big enough. Niche enough.

The wedge

Spontaneous flyers, ages 25–45, single home airport, two trips a year already booked. Decision happens Tue–Thu.

Bottom-up math

$500K \text{ MAU} \times \$14 \text{ RPM} \times 12 \text{ mo} = \$84M$

Capture 7% of SAM = \$6M ARR floor

RPM grows with hotel + Pro v2

COMPETITION

Everyone owns one slice. Nobody owns the weekend.

	Conditions	Flights	Weekend window	Confidence flag
OnTheSnow / OpenSnow	✓ ski only	✗	✗	✗
Surfline	✓ surf only	✗	✗	✗
KAYAK / Hopper	✗	✓	✗	✗
Skyscanner	✗	✓	✗	✗
AllTrails	weather only	✗	✗	✗
PEAKLY	✓ ski + beach	✓ exact-date	✓ Fri-Mon best-2-of-4	✓ low-conf hidden

Edge: only product combining live Fri-Mon weather + cheap flights + a confidence flag that admits when forecast is too uncertain.

Affiliate-first. Free to user. Six revenue streams.

Stream	Status	RPM / 1K MAU

7-day

honest forecast horizon, with confidence flag

Shipped in the last 30 days

- Pivot to weekend-spontaneity (surfing retired, scoring engine rebuilt around Fri-Mon)
- Supabase cloud sync — magic-link auth, lazy-loaded, anon flow preserved
- Open-Meteo proxy with 2hr cache + in-flight dedupe (Reddit-spike-proof)
- Strike Alerts polling worker + native APNS push (server-side, awaiting .p8 key)
- Live weekend-specific pricing via Travelepayouts proxy (exact Fri-Mon dates)
- ScoreBreakdown component — every score auditable, no more black box

Three phases. One throughline: trust.

NOW • Q2 2026

Ship & validate

- App Store v1 (Capacitor wrapper)
- APNS production keys live
- Reddit + ProductHunt launch
- First 1K MAU
- Plausible-driven weekly cohort

NEXT • Q3-Q4 2026

Earn & retain

- Hotels in deal score (v2)
- Pro UI revisited if revenue gap
- Group coordination flow
- Email digest for saved venues
- 10K MAU, \$120/mo run-rate

LATER • 2027

Defend the moat

- Crowd intelligence (user reports)
- Multi-airport, multi-traveler
- Sport expansion (gated by data)
- B2B API for travel agents
- 100K MAU, profitable

Niche communities first. SEO compounds. Paid never.

1

Reddit

r/skiing, r/surfing-retired-fans, r/digitalnomad, r/travel. Honest 'forecast confidence' framing wins.

2

ProductHunt

Launch around the first big winter storm — peak skiing-related search demand.

3

SEO long-tail

'best ski weekend Dec 12 from Boston' — programmatic pages keyed to upcoming weekends.

4

Share-a-list

Viral loop already shipped. Recipient lands on a friend's curated list with sign-in CTA.

CAC target: \$0. Affiliate-funded growth. If a channel needs paid — kill it, find a different niche.

One founder. AI-leveraged.

Jack Ciluzzi

Founder, product, ops

Solo non-developer. Ships via AI agents — daily DevOps, PM, Revenue, Content, UX inputs roll up to a single briefing each evening.

The AI team

DevOps agent

Cache busts, deploy chains, VPS health

Product Manager agent

Daily prioritization, scope cuts

Revenue agent

Affiliate gates, RPM analysis

Content & Data agent

Venue data integrity, photos

UX Designer agent

Filter states, empty states, CTAs

Where the roof could leak.

Open-Meteo rate limits

Already mitigated: VPS proxy with 2hr cache + in-flight dedupe. N concurrent users = 1 upstream call.

Travelpayouts deprecation

Affiliate-network risk. Skyscanner Partners + Aviasales direct as fallback. Token already server-side.

App Store rejection (push)

Phase plan: if APNS not live by 2026-05-13, hide Alerts on iOS, ship web product to Store.

Solo-founder bandwidth

AI agent team handles ops. Two-strikes rule kills unactionable findings. Daily briefing = single source of truth.

Forecast accuracy public failure

Confidence flag is the moat — we already say 'don't trust this weekend.' Honesty beats overpromise.

THE VISION

OpenSnow tells you the snow.

KAYAK tells you the flights.

Peakly tells you which weekend is actually worth it.

GOAL

100K MAU
